AI - POWERED STUDY PLANNER

(DTI LAB PROJECT)

Live Demo:

https://naga-lakshmi10.github.io/ai-study-planner-DTI/

1. Project Title

AI – Powered Study Planner

2. Objective

The objective of this project is to design and develop a responsive AI Study Planner web application interface that helps students efficiently organize their study schedules, manage notes, track progress, and improve productivity using frontend technologies.

3. Project Description

This project is a frontend-based web application that simulates a smart study management system. It provides an interactive and user-friendly interface where users can create study plans, manage notes, track progress, and view study overview dashboard.

The application is developed using HTML, CSS, and JavaScript and runs completely in the browser without backend support.

4. Technologies Used

- HTML5 – Structure of web pages
- CSS3 – Styling and responsive design
- JavaScript (Vanilla JS) – Application logic and interactivity
- LocalStorage – Client-side data storage

5. System Requirements

Hardware Requirements

- Computer / Laptop
- Minimum 4GB RAM

Software Requirements

- Web Browser (Chrome / Edge / Firefox)
- VS Code or any text editor

6. Modules / Features

6.1 Home Dashboard

- Entry point of the application
- Navigation to all modules

6.2 Study Planner Module

- Create study schedules
- Organize daily and weekly plans

6.3 Notes Module

- Add and manage study notes
- Edit and view stored notes

6.4 Progress Tracking Module

- Track completed study tasks
- Visual progress representation

6.5 Login Interface (UI)

- Simple login and signup interface
- Basic authentication layout

6.6 Study Overview Dashboard

- Displays overall study summary
- Centralized performance view

7. Algorithm / Working Logic

- Display home dashboard on startup
- Navigate between module
- Create and store study plans
- Add and manage notes
- Track progress dynamically
- Display study overview dashboard

8. Use Case

User opens the application, logs in, creates study plan, adds notes, tracks progress, and views study overview dashboard.

```

11. Advantages

- Simple and user-friendly interface

- Lightweight and fast application
- No backend requires.
- Helps students organize studies efficientl.
- Easy to understand and use

12. Limitations

- No database integration
- Data may be lost on refresh
- No AI backend functionality
- Limited scalability for large systems

13. Future Enhancements

- AI-based study recommendations
- Backend integration using Firebase or Node.js
- Cloud storage for notes and plans
- User authentication system
- Mobile application development

14. Conclusion

The AI Study Planner project successfully demonstrates the development of a responsive and interactive study management system using frontend technologies. It helps students organize their study activities efficiently and provides a strong base for future full-stack or AI-based applications.
