CSE-E

Objective

- To design an AI-based study planning system
- To help students manage time effectively
- To generate smart and personalized study schedules
- To improve productivity and learning efficiency
- To support better exam preparation with structured planning
- To reduce stress by organizing study tasks systematically

Introduction

- AI Powered Study Planner is a smart web application
- It helps students organize study schedules easily
- Uses AI logic to optimize time and subjects
- Provides a simple and interactive dashboard
- Helps students stay consistent in their studies

Features

- Smart study timetable generation
- Daily and weekly planner view
- Task creation and management
- Progress tracking system
- Notes and reminders
- Responsive UI design

Working / Logic

- User enters subjects, topics, and available time
- System analyzes priority and workload
- AI generates optimized study schedule
- Tasks are stored in local storage
- User can edit and update tasks anytime
- Progress is tracked automatically

Technology Used

- HTML – Structure
- CSS – Styling
- JavaScript – Functionality
- AI Logic (Rule-based system)
- Local Storage – Data saving

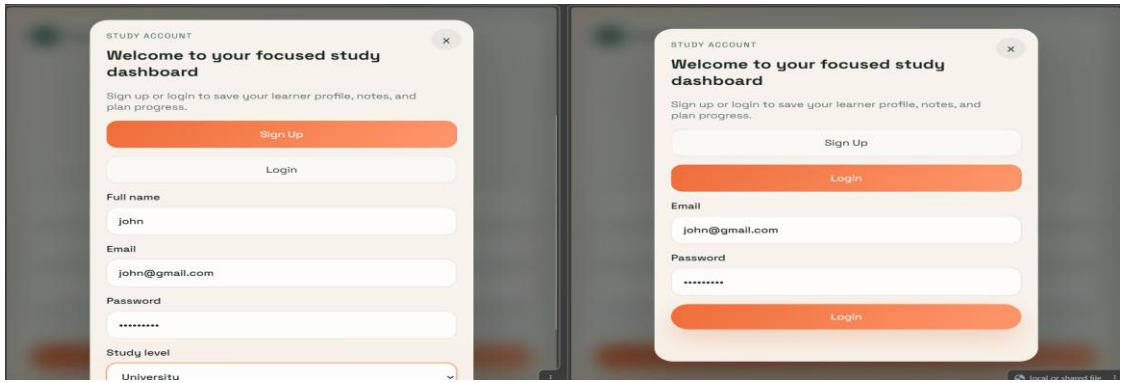
Modules

- Home Dashboard Module
- AI Planner Module
- Task Management Module
- Notes Module
- Progress Tracker Module

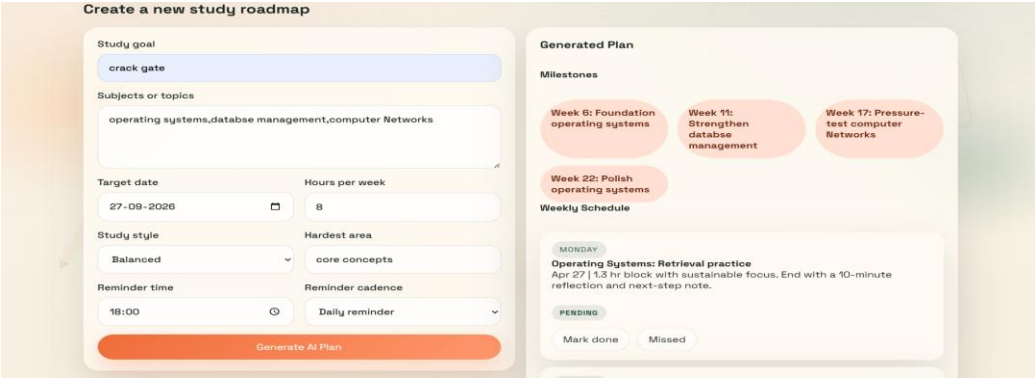
Screenshots

- Home Page View

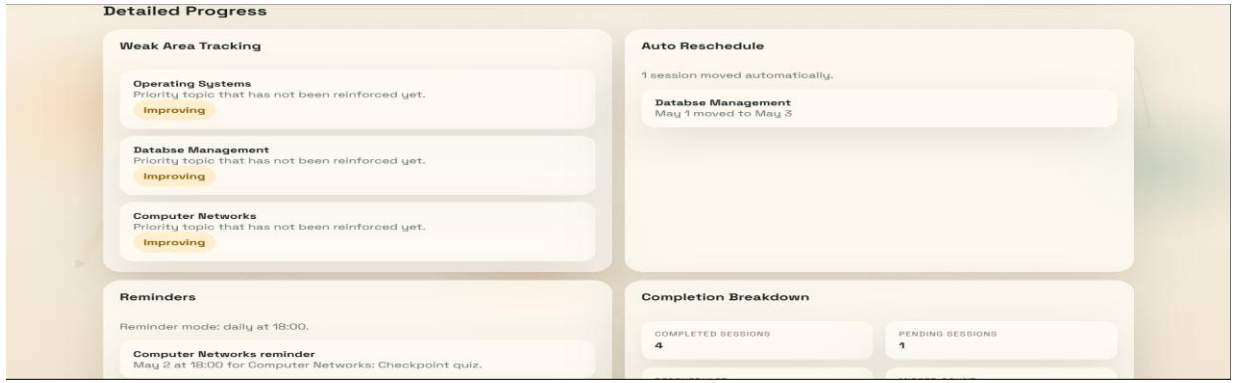
Login/Signup



- Generate Plan



Progress



Advantages

- Improves time management
- Reduces manual planning effort
- Increases productivity
- Easy to use for students
- Helps in exam preparation
- Provides structured learning approach

Limitations

- Requires manual input of study data
- Limited AI intelligence (rule-based system)
- No real-time external integration (like calendar sync)
- Depends on user consistency for accuracy
- No advanced predictive learning feature

Future Enhancements

- Integration with advanced AI models (like ChatGPT API)
- Mobile application version
- Cloud storage support
- Smart notifications and reminders
- Performance analytics using graphs
- Voice-based study planning system

Conclusion

The AI Powered Study Planner is an efficient system that helps students plan, organize, and track their studies effectively using intelligent scheduling techniques. It improves productivity, reduces confusion, and supports better academic performance.
